AI-native engineer who ships production systems with agents. I led the first full-system Cursor-powered migration of a legacy codebase to modern Next.js, pioneered cloud agent workflows against enterprise repos, and build personal multi-agent systems used daily. I combine deep agentic engineering with end-to-end delivery—React frontends through backend services to Kubernetes production.

SKILLS

Frontend: React 19, Next.js App Router, TypeScript, Vite, Tailwind, Design systems

Backend: .NET BFFs, Java / Kotlin / Spring Boot, Elasticsearch, OpenAPI contracts, Stored proc to API migrations

Quality: Vitest / Jest, Playwright, Coverage gates, Static analysis

Platform: Kubernetes ingress, NGINX, Cloudflare, AWS, GitHub Actions, Octopus Deploy, Dynatrace / structured logs

Agentic engineering: Cloud agent workflows, Cursor skills/rules/environments, MCP server integrations, Multi-agent systems, Cloudflare AI Workers, Prompt engineering, Agent-driven migrations

Product: Search and discovery, A/B experiments, Feature flags, Marketplace UX

EXPERIENCE

Auction Technology Group (ATG) — Omaha, NE (remote)

Senior Software Development Engineer

Oct 2024 - Present

Software Development Engineer

May 2022 - Oct 2024

- Led first full-system agent-powered migration at company: rewrote entire Classic ASP application to Next.js frontend + .NET BFF backend using Cursor, establishing patterns for AI-native development that teams now follow.
- Pioneered cloud agent usage in early adoption phase: created custom Cursor skills, rules, and cloud environments against company codebase; built repeatable agentic workflows that enable teammates to ship production changes faster.
- Built personal multi-agent systems for life operations used daily; architected AI workers on Cloudflare; combined deep prompt engineering with editor-native agent loops to automate complex software tasks end-to-end.
- Own marketplace search and discovery stack: React/Next.js UI → .NET BFF → Java/Spring search services → Kubernetes production. Lead App Router migrations with behavior parity, design system integration, URL-as-state UX.
- Enforce contract-first integration and quality gates: BFF transformations, OpenAPI contracts, automated contract tests in CI, Vitest unit coverage, Playwright browser scenarios—maintained throughout legacy-to-modern transitions.
- Earlier as SDE: delivered payments integration ahead of schedule; maintained Spring Boot microservices and legacy Java/ASP monoliths; contributed shared components adopted across modern TypeScript UI.

Priority Technologies LLC

Senior Frontend Developer

Jul 2017 - May 2022

- Modernized frontend of 1.5M+ LOC enterprise monolith with Vue.js, Vuetify, Tailwind, and Pinia—clearer UX and measurably faster page loads.
- As sole frontend engineer, shipped a state-based product from idea to production in under six months, including requirements and design.
- Led Struts 1 to Struts 2 migration as PM and developer with minimal knowledge transfer; rolled out to all clients on time and under budget.
- Migrated dependency management from manual ANT builds to Maven, including security reviews and library upgrades.

- Built consumer-facing web presence supporting product acquisition; integrated JasperSoft and HighCharts for embedded reporting.

EDUCATION

University of Nebraska-Lincoln

2012 - 2016

Bachelor of Business Administration (B.B.A.), Finance
